

The line of SecurOS™ Video Management Platform

SecurOS Xpress is low cost solution for video recording and management in small to midsize security deployments, and brings the surveillance system into the network. SecurOS Xpress shares the same core system and graphical user interface as the major SecurOS versions, and can be easily upgraded to either one for future expansions. SecurOS Xpress supports a single server installation, up to 64 cameras.

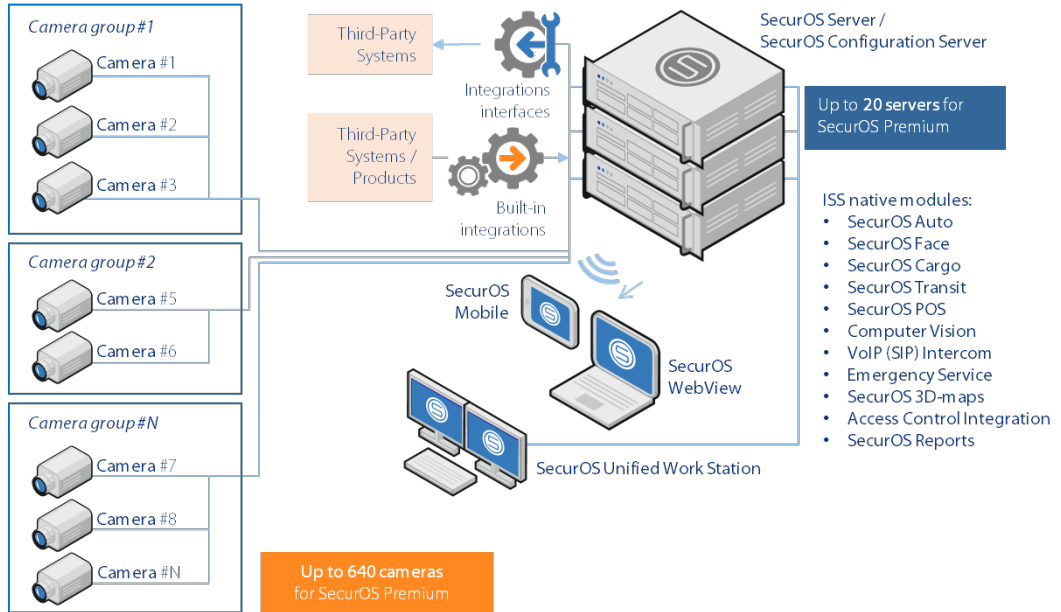

SecurOS Professional is an ideal solution for standalone or multi-server, medium to large video surveillance deployments up to 320 cameras. It includes Point of Sale (POS) integration (SecurOS POS) and can be used as a standalone system or it can be connected to consolidate system is based on SecurOS Monitoring and Control Center (MCC).

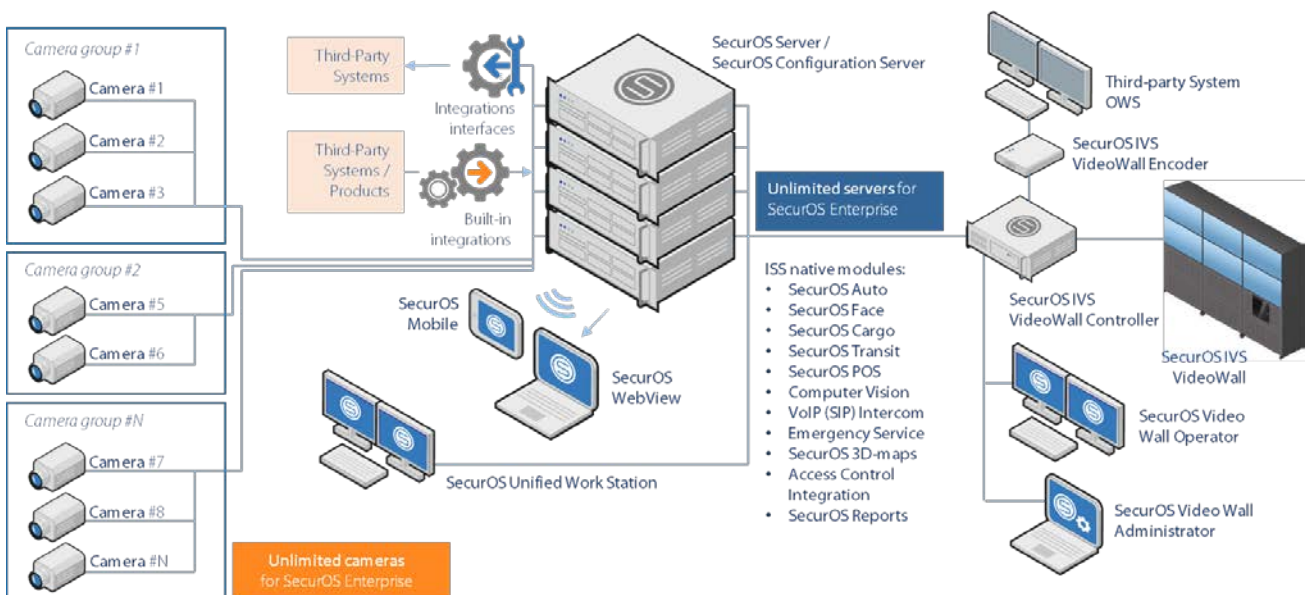

SecurOS Premium is an excellent choice for video surveillance applications that require advanced video analytics on specific camera locations and installations. It supports up to 640 cameras. SecurOS Premium includes ISS native Video Analytics Modules (see below). It can be used as a standalone system or it can be connected to a consolidate system is based on SecurOS Monitoring and Control Center (MCC) system.

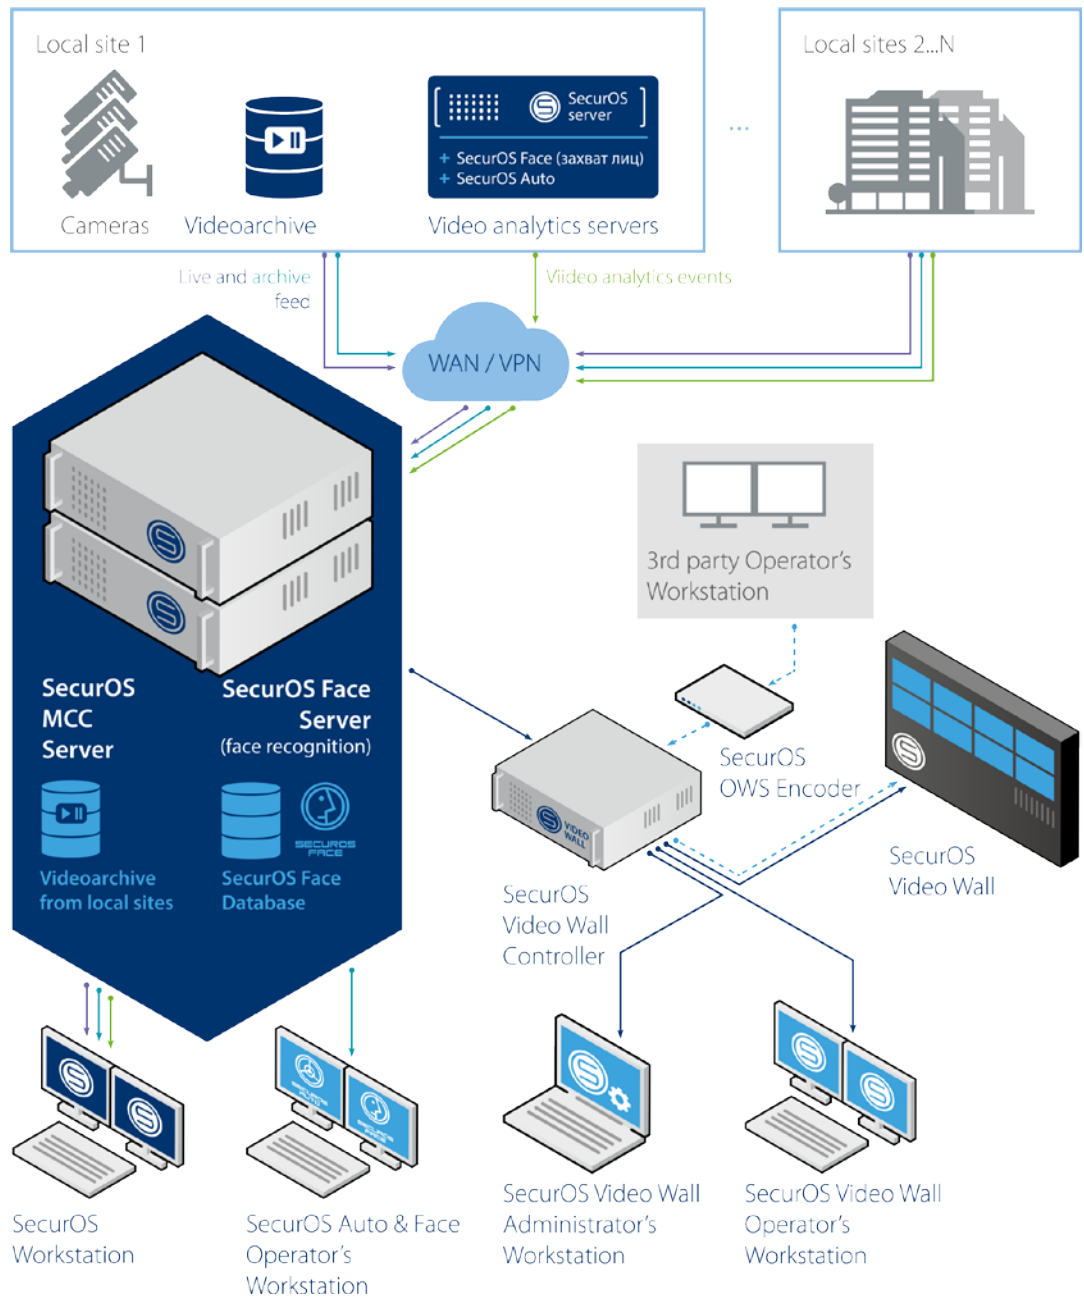

The global standard for video management and video analytics, the ISS flagship video management software, **SecurOS Enterprise** is the nucleus of a complete surveillance and security management topology. The framework can manage and monitor an unlimited number of cameras and devices, apply intelligent video analytics, and integrate a variety of disparate external systems into one centralized command and control interface. The SecurOS platform is suited for large mission critical applications that involve hundreds or thousands of cameras, sensors and control systems unified into one network.

SecurOS Monitoring & Control Center (MCC) aggregates geographically diverse sites into a centralized and integrated command and control infrastructure. All SecurOS product lines, excluding SecurOS Lite are controlled. The central management stations can receive, display, record video and manage events as well as all video analytics modules and externally integrated systems.

SecurOS 9.5 Features List & Comparison Chart

Features	SecurOS Xpress	SecurOS Professional	SecurOS Premium	SecurOS Enterprise	SecurOS MCC

ISS software-hardware solutions based on SecurOS**

SecurOS Motus	Specialized Turnkey Camera for LPR/ANPR
SecurOS Crossroad	Detection of Complex Traffic Violations
SecurOS IVS VideoWall	Information Display Visualization System for operational team collaboration
SecurOS Cargo Terminal	Visual Inspection and Automation of Terminal Gates System
SecurOS Flatimus	Under Vehicle Surveillance System

* Determined by SecurOS license and/or can be limited due to security system hardware components
